

# ZHK INOVA

+ KonAir

**euroclima**<sup>®</sup>  
We care for better air

## NO PIPING NECESSARY

The autonomous plug & play solution does not require long-term on-site installation and the entire unit comes „**from one source**“. The unit combination between the ZHK INOVA Air handling unit and a condensing unit was specially designed for simple and quick commissioning. **No additional water pipes** to the unit needs to be installed for **heating and cooling**.

## REDUCED TIME REQUIRED

For the Installer and End-user, there is now **only one contact person** who is responsible for the function of the system. And the customer can be sure, about the perfect function between the individual components of the unit. All used components has been tested many times and harmonizes with each other in the system. This **reduces inefficiencies** in the interfaces and cuts the time required for installation and commissioning.

## PROJECT-SPECIFIC CONFIGURATION

An AHU is extended with a high-quality control technology and various other components such as coils, condensing unit etc. and made to the specific project requirements. All the knowledge come from the **specialist departments of Euroclima** and are optimally combined together. **Highest energy efficiency** is our standard. In addition, the air handling unit can be used to run with a **fresh air rate of 100%**.

## READY TO PLUG IN DELIVERY

Precise planning, exact configuration and **complete factory completion** guarantee an easy commissioning of the system at side. With experience and know-how, our specialized engineers ensure a **smooth handover** to you. The control of the unit can at any time be adapted to your requirements.

## YOU DECIDE - WE DELIVER

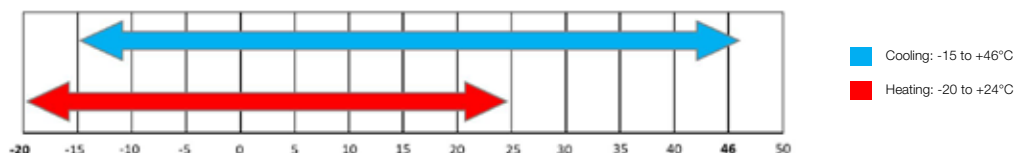

Whenever you decide for a ZHK INOVA + KonAir unit, you have the choice between the **delivery of the condensing unit loose** or of the **unit complete as a monoblock**. With the delivery as a monoblock - you **save on installation costs** and time and **reduce time** in the organization of the delivery (one source delivery).

## SYSTEM SOLUTIONS FROM A SINGLE SOURCE

Benefit from our know-how and **many years of experience** in all aspects of air handling units. With the KonAir Monoblock you can configure your system solution exactly as you need it for your project. We supply from one source, completely **“plug and play” for direct connection** to your duct system. We supply the air handling unit with the configuration and components as required for your project and then we combine this customized AHU with our condensate unit.

## HEATING AND COOLING

We exclusively use the condensate unit from worldwide know and renowned manufacturers. The condensate unit itself can be **modelled via inverter** and we use **R32 as refrigerant**. The power supply for the condensate unit comes from the AHU and the regulation is perfectly coordinated between the units (AHU & condensate unit). The capacities of the condensate units are adapted to your requirements and cover the following range for heating and cooling:
